Title:	tle: Emergency Department Performance Report						
Author: Je	remy Toze	r, Interi	im D	irector of Operations			
Purpose o							
To provide	an overvie	w and	upda	ate on the Emergency	Care I	Delivery for UHL.	
The Repor	t is provid	led to t	he E	Board for:			
Decision				Discussion	$\sqrt{}$		
Assuranc	е	$\sqrt{}$		Endorsement			

Summary / Key Points:

- December has been a challenging month where performance deteriorated to 89.4% for ED type 1 and 2 attendances
- For the second month in a row only 1 out of the 5 quality indicators was achieved.
- Despite robust planning for the Christmas and New Year period there were high numbers of breaches and poor flow across the emergency process .CCGs have asked for a detailed account of the issues.
- The 2 priority workstreams focussing on ED processes and assessment units are well underway. Some early changes should take effect as early as January and February 2013.
- The CCG collaborative continue to support the internal steps taken by UHL to improve performance through the programme of work to be facilitated by Right Place Consulting.
- Bids have been submitted and the proposals supported by the ECN for the application of winter pressures funding.
- CCGs have provided the Trust with an incentive for achieving the 95% target through an incentive payment of £150K for each week that the Trust achieves

or exceeds the target				
Recommendations:

REPORT TO: TRUST BOARD

REPORT FROM: JEREMY TOZER, INTERIM DIRECTOR OF OPERATIONS

REPORT SUBJECT: ED PERFORMANCE REPORT

REPORT DATE: 31 JANUARY 2013

1.0 INTRODUCTION

Sustained performance improvement across UHL's emergency processes and the ability to achieve the emergency 95% target on a continuous basis still remain a top priority for both UHL and the local health economy. Of equal priority is the need to deliver high quality, safe care to all patients presenting for emergency care and treatment. Renewed efforts to deliver some of the key changes required in order to deliver the necessary performance improvements continue with the external support from Right Place Consulting.

Throughout December and in particular over the Christmas New Year period the Trust was particularly compromised in the ability to manage the emergency flow which resulted in poor achievement of the ED target over several days. In month the Trust saw a continued deterioration in achievement of the 4 hour target. Performance for UHL Type 1 and Type 2 activity to week ending 8th January 2013 was 84.4% against an achievement of 89.4% in November, and the UHL + UCC performance was 88.1% compared with 91.6% in the previous month. The Trust only achieved 1 of the 5 ED quality performance indicators which continues to reflect the process issues within the hospital.

This report provides details for the current level of performance, an overview of the issues faced by the Trust over the holiday period and the progress against plans that are now being developed at pace to remedy performance and improve emergency flow.

2.0 CURRENT ACTIVITY AND PERFORMANCE

2.1 Attendance rates

In line with reports from previous month's ED attendance rates remain consistently above attendance rates seen in 2011/12 even when pre diversion rates are taken into consideration as shown in figure 1 below. Attendances remained higher than average when compared to a monthly average of 13,949 attendances. This equates to a 4.8% increase in activity when compared with the same period last year and a reduction of 51 attendances against the previous month.

EMERGENCY DEPARTMENT TYPE 1 and 2 PLUS URGENT CARE CENTRE 17,000 16,000 15,000 14,000 13,000 UHL 2011/2012 (Post Diversion) 12,000 UHL 2011/2012 (Pre Diversion) UHL 2012/2013 (Post Diversion) 11,000 UHL 2012/2013 (Pre Diversion) 10,000 Apr Jan Feb Š ရှိ ရ May Mar

Figure 1: ED Attendances April – December 2012

Further analysis of the trend over the Christmas and New Year period is provided later in the report.

2.2 UCC conversion rates

The downward trend in numbers of patients being diverted to the UCC has continued between October and December.

	Table 1: ED	Pre and Post	Diversion	Attendances	April -	- December 2012
--	-------------	--------------	-----------	-------------	---------	-----------------

	EMERGENCY DEPARTMENT TYPE 1 and 2 PLUS URGENT CARE CENTRE								
	UHL 2010/2011 (Post Diversion)	UHL 2010/2011 (Pre Diversion)	UHL 2011/2012 (Post Diversion)	UHL 2011/2012 (Pre Diversion)	UHL 2012/2013 (Post Diversion)	UHL 2012/2013 (Pre Diversion)	Overall % Change 12/13 vs 11/12		
Apr	14,117	14,117	13,507	14,358	13,532	14,332	-0.2%		
May	14,574	14,574	13,871	14,636	14,819	15,633	6.8%		
Jun	13,509	14,298	13,318	14,197	14,248	15,022	5.8%		
Jul	12,983	14,100	13,075	14,014	14,107	14,860	6.0%		
Aug	12,544	13,757	13,086	14,109	13,815	14,817	5.0%		
Sep	12,726	13,720	13,270	14,142	13,839	14,719	4.1%		
Oct	12,918	14,022	14,002	15,000	14,051	14,955	-0.3%		
Nov	13,057	13,963	13,226	14,051	14,201	14,933	6.3%		
Dec	13,500	14,488	13,291	14,162	14,150	14,839	4.8%		
Jan	12,830	13,893	13,260	14,196					
Feb	12,263	13,202	12,978	13,762					
Mar	14,100	15,119	14,884	15,719					
Sum:	159,121	169,253	161,768	172,346	126,762	134,110			

As reported in previous months post diversion activity continues to be above pre diversion activity levels for the same period in 2011/12. In December 2010/11 6.8% of attendances were deflected. This shifted to 6.1% in 2011/12 and this year the figure stands at 4.6%. There is a similar trend with overall activity and the position year to date as summarised:

Figure 2: UCC Diverts June 2010 to December 2012

Active dialogue continues with our external partners to review the concept of a 'single front door' aimed to change existing pathways to maximize deflection.

2.3ED 4 Hour Performance target

The following graph shows the performance of the Trust 4 hour target to week ending 8th January 2013. In December there were issues with flow across the emergency system which resulted in a further deterioration in performance from 89.4% in the previous month for ED type 1 and 2 attendances to 84.4% to week ending 8th January 2013 and from 91.6% to 88.1% when UCC activity is taken into account during the same period, to as shown below:

Table 2 Overall ED Performance December 2012

Site	Туре	Atts	Breaches	% < 4 hr
UHL	Type 1 + 2	14,150	1,447	89.77%
Urgent Care				
Centre	Type 3	4,090	4	99.90%
UHL + UCC Total	All	18,240	1,451	92.04%

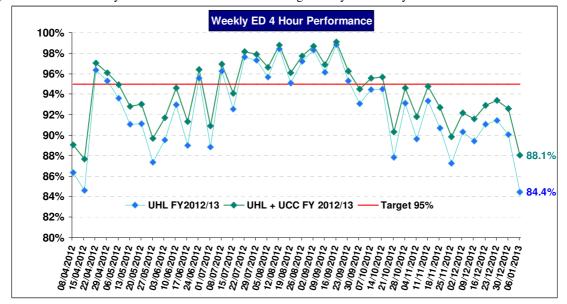

Figure 3: Overall Weekly ED Performance to Week Ending Sunday 6th January 2013

Against the revised trajectory submitted to CCGs in November weekly performance has fallen short of the requirement as demonstrated below:

Date w/c	Actual	Trajectory	Attendances	Breaches
09/12/2012	91.6%	91.6%	4,129	347
16/12/2012	92.9%	92.2%	4,204	299
23/12/2012	93.4%	94.6%	4,110	272
30/12/2012	92.6%	94.3%	4,068	301
06/01/2013	88.1%	94.6%	4,169	498

The trajectory shows 95% performance from 18th February and beyond as agreed with the CCG's and SHA. The 18th February was put into the trajectory based on various strands of the Right Place Consulting work being completed and showing benefit. These strands of work are on track, however hitting 95% will provide a real challenge to the Trust internally To demonstrate continued support CCGs have recently offered a weekly incentive payment for each week that the 95% target is achieved.

Based on performance year to date and the trajectory going forward the Trust would only achieve 94.5% against the 95% target for the year.

2.4 Christmas performance

Over the Christmas and New Year period the Trust experience heightened pressures on the emergency process. Analysis of performance over the past 2 years shows that there were 128 more attendances over the Christmas and New Year period for 2012/13 with 376 more breaches.

Acute admissions and discharges between the 20th December 2012 and 3rd January 2013 were overall similar between years but different on a day to day basis. This was due to the profiling of bank holiday days. Using the weekend and bank

holidays compared from one year to another there is virtually no difference in numbers admitted. There was however a noticeable difference in the over 90yr old range where admissions in this range were up 36%.

Occupancy in the wards in the week commencing 26th December 2012 to 2nd January 2013 changed from 89% to 95% in Medicine, 89% to 100.3% in Respiratory, and from 88.1% to 94.4% across the Acute Division as a whole

2.5 Breach analysis

The most significant breach numbers continue to appear within the Majors area of the department, totalling 815 in the month of December 2012. Consistent with previous months 63% of the total number of breaches occurred within the Majors area of the department between October 2012 and 8th January 2013

Table 3: Breach analysis by allocation Oct $12 - 8^{th}$ Jan 2013:

Allocation	Oct-12	Nov-12	Dec-12	1st to 8th Jan-13	Total	Cumulative %
CHILDREN	52	72	66	6	196	5%
MAJORS	620	873	815	316	2624	63%
MINORS	79	118	127	52	376	9%
RESUS	233	306	313	104	956	23%
Sum:	984	1369	1321	478	4152	100%

Whilst the Childrens and the Minors areas of the emergency department are performing better, action is being taken to ensure that these areas strive for a zero tolerance of breaches.

The top 3 reasons for breaches are summarised as:

Bed breaches 32 %ED process 27 %Clinical reasons 16%

Table 4: Type 1 Delay Reasons in Quarter 3 to 8th January 2013

Delay Reason	Oct-12	Nov-12	Dec-12	1st to 8th Jan-13	Total	Cumulative %
Bed Breach	312	434	397	184	1327	32%
ED Process	259	382	340	148	1129	27%
ED Capacity (Cubicle Space)	28	8	17	10	63	2%
ED Capacity (Inflow)	36	94	128	30	288	7%
ED Capacity (Workforce)			4		4	0%
Clinical Reasons	161	186	245	56	648	16%
Specialist Assessment	36	33	36	11	116	3%
Specialist Decision	9	8	7	1	25	1%
Investigation (Imaging and Pathology)	62	80	56	8	206	5%
Transport	68	105	73	29	275	7%
Treatment	13	39	18	1	71	2%
Sum:	984	1369	1321	478	4152	100%

This picture is consistent with previous monthly reports although the number of delays due to capacity and inflow has increased again in December. There has been a slight improvement in the numbers of breaches that are transport related. Work is on-going within the department to improve accuracy of recording of breaches supported by daily review.

Bed breaches:

The continuous availability of beds on assessment units and access to speciality beds is a key element to allow the timely flow of patients out of the Emergency Department. Both the availability of beds at the time of request and the ability of the emergency department to transfer a patient from the department without delay once a bed is available result in lengthy waits for patients.

2.6 ED Quality Performance Indicators

Only one of the clinical quality indicators was met again in December as shown in figure 5 below. Time spent within the department has increased once again and continues to remain at the highest level since April 2012. The reasons for this are multi faceted and include higher levels of attendance, poor ED processes, lack of outflow associated with lack of bed availability and staffing levels as reported in previous months.

Figure 5: ED Quality indicators January 2012 – December 2012 **CLINICAL QUALITY INDICATORS** PATIENT IMPACT Aug-12 Sep-12 Oct-12 Nov-12 2.4% 2.1% 2.2% 2.7% 2.5% Left without being seen % <=5% Unplanned Re-attendance % **TIMELINESS** TARGET Jul-12 Aua-12 Sep-12 Time in Dept (95th centile) 240 238 240 < 240 Minutes Time to initial assessment (95th) 15 <= 15 Minutes Time to treatment (Median) 49 53 <= 60 Minutes

2.7 Staffing Impact on performance

Vacancy levels continue to remain high for the Emergency Department despite rigorous recruitment and retention activities supported by the Deputy Director of Human Resources. As previously reported significant numbers of bank and agency staff continue to be used in order to achieve optimum staffing levels. The singular contract for nurse agency staff continues to be used in order that some continuity can be achieved in terms of staff working within the department. Fortnightly recruitment strategy meetings continue with Senior HR input, to look at recruitment alternatives and creative recruitment solutions. Permanent and locum consultant positions continue to be advertised. Promotion of nursing opportunities within ED will feature as part of the planned recruitment drive planned for 26th January 2013.

2.8 Right Place Consulting:

The work continues on track with the new model of care due to be implemented on 18th February 2013. Attached are 4 documents relating to the work:

- 1. ED and Assessment agreed model (appendix 1)
- 2. ECP highlight report (appendix 2)
- 3. Milestone Plan (appendix 3)
- 4. Suggested KPIs (appendix 4)

There is still considerable risk associated with the 18th February date for compliance of the 95% target. This centres around having enough capacity in the system to allow the model to embed.

Weekly reports are taken to Executive Directors looking at all options to temporarily increase capacity.

5 RECOMMENDATIONS

Board members are asked to:

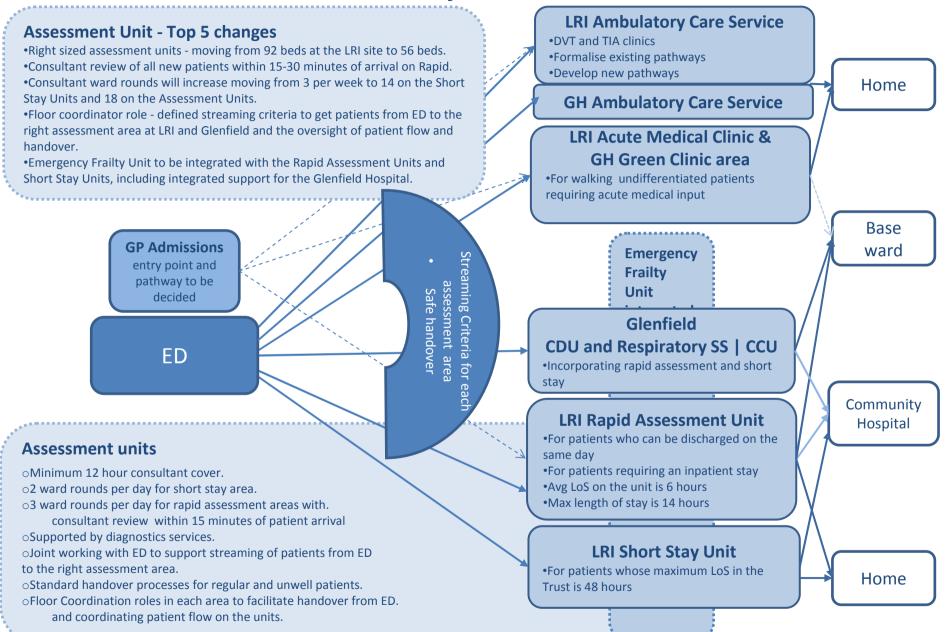

- Note the content of this report;
- Continue to support the revised programme of improvement recognising the opportunity created through the right place consulting work, and
- Note CCG support and the associated incentives for weekly achievement of performance.

UHL Emergency Department Pathway Appendix 1 Walk in Assessment Process **Minors** Home / •Sees and Treats Minors patients •UHL and UCC joint team Community **Receptionist for Walk ins** •Identifies prioritises and streams minors •ENP and Therapist led and majors and resus patients or those Access to medical input as required •Books in walk in arrivals Access to input from external specialist on alternative pathways immediately teams as required •Identifies from inclusion list if patient is Minors. Sick or for each assessment area/Clini assessment Streaming Criteria fo **Maiors** Safe handove •Works based on results available following initial assessment **Ambulance Assessment** Differentiates those requiring **Process** additional care Consultant and MDT delivered •Discharges directly home as •Standardised approach taking approx. appropriate 15minutes per patient **Receptionist for** •Bloods and imaging requested only as **Ambulances** required •Patient moved to onward step via Resus imaging if needed •Provides first line response to Joint clinical and clerical handover **EDU** Patients assigned to a clear pathway assess and stabilise sick patients on arrival •Designed to cope with up to 20 per •Refers on to other specialist teams Patients on defined hour across 3-5 bays protocolised as required pathways with •Works with external teams as expected LOS needed in unit

Emergency Department - Top 7 Key Changes

- oConsultant led Standard Assessment process for all Ambulance Arrivals during peak periods within 15 minutes of patient arrival (ST4 or above after 11pm) supported by multi disciplinary team approach to assessment bay process enabling removal of queues and waits.
- oMinors by-pass standard triage for clear cut Minors patients where the wait to be seen is <30minutes with the aim of diverting all UCC patients appropriately and identifying higher risk majors patient. See and Treat service with productive ENP and MDT team.
- oMajors is used to undertake additional work up to differentiate the patients pathway or where patient is in need of first line treatment only prior to discharge. oResus supported by responsive external teams in line with the case mix and appropriately staffed and equipped.
- oEDU continuing to take patients on a range of protocolised pathways up to a maximum LOS of 24hours (except head injuries).
- oThe department is staffed to cope with 90 percentile demand.
- The department has a geared approach to cope with a range of common scenarios supported by clear escalation plans information dashboards and role cards.

UHL Assessment Units Pathway

Appendix 2

Project Highlight Report

Project Name: Emergency Care Pathway Implementation Programme (ECP)

Period:	18 th January 2013	Summary position				
Author(s): Tessa Wa		Last period:	G	This period:	G	

1 - Status Update

Week 6:

Programme Status

- Workstream 1 and 2 implementation plans on track with identification of gaps from current to future state finalised by respective sub – groups and signed off by Programme Board on 15th January.
- Quality Impact Assessment template finalised by Suzanne Hinchliffe and Kevin Harris.
- Meeting held with Mark Wightman and Jade Atkin to agree the communication and engagement process and develop a clear plan of activities with CCGs/ GPs during design of future state. Initial GP Newsletter article submitted.
- Work on programme interdependencies across Workstreams 1 and 2 commenced.
- Agreement across Workstreams 1 & 2 to hold a trial run day on 8th February and full implementation of core model on the 18th February. Consideration and planning for the half term period preceding the 18th his critical.

Workstream 1:

- Commenced planning for minors process changes
- Assessment bay virtual planning group underway with planned visit to Nottingham w/c 21st January
- Initial scoping for departmental coordination complete
- Frail friendly ED requirements passed to WS2 for incorporation in to overarching plan for geriatrics

Workstream 2:

- Planning commenced for the Ambulatory Care pathways move to Fracture Clinic due to take place by 31st January
- Commenced Standard Operating Procedure for Assessment Unit working and detailed design of functions and roles and responsibilities
- Commenced the Service Level Agreement between Diagnostics and the Assessment Units to meet future state standard requirements of rapid access to prioritised tests.

Workstream 3

- Workstream 3 Bed Configuration inaugural meeting occurred with high level delivery milestones finalised and PID ratified at Programme Board.
- Commenced planning for 18th February changes to bed configuration full implementation plan to be in place with associated medical model confirmed by 28th January 2013.

Stakeholder Engagement

- 2 hour Glenfield 'Drop In' Session with Workstream clinical leads delivered.
- Attendance at meetings with Registrars and Matrons at Glenfield. Attendance at Junior Doctors meeting scheduled.
- Forums and meetings being accessed to ensure staff are fully briefed and to ensure
 engagement exists with key stakeholders is critical to inform the implementation of the
 outputs of the group.

NHS Trust

Communications

- Third edition of 'A3 Bulletin' disseminated to LRI, Glenfield sites and to Executive Team and Trust Board.
- Article placed in the next edition of the 'Team Talk' circular.
- Planning undertaken to develop a hub and wall visual representation of the future model being worked up with live weekly updates on most recent developments. These will be placed within an area in ED, Assessment Units at LRI, CDU at the Glenfield and in the RPC office on the Executive floor.

Week 7 focus:

- Drafting of the Quality Impact Assessment for each workstream
- FAQ's and staff intranet 'promo Box' booked to communicate ECP to staff further.
- Quick win implementation planning and delivery
- Standard Operating Processes to be worked up across Workstreams One and Two.
- Vocera or IBM equivalent specification to be worked up with IT director.
- Pilot exercise planning work to be finalised for 8th February including staff rotas.

Milestone	Target date	Status (R/A/G)*	Estimated date of completion
Milestone map and Quick wins implemented	21-01-13	G	21-01-13

Measure	Output	KPI Target
ouou.o		Tit Tranget
time for ambulance crew handover	minutes from arrival to completion of clinical and clerical handover	15minutes max
variance of inflow to outflow	the volumes attending and discharged from the ED by hour by day of the week	matched
Time to a decision by stream	time from arrival to decision	TBC by stream
discharge rates by stream	the discharge home rate	TBC by stream maintain or improve on 23% overall admission rate
Reattendance rates	reattendances	maintain or reduce across all units in ED
time in the ED	Time from arrival to discharge or transfer	4hr target achieved
Time from request to scan and request to report by imaging type		TBC by imaging type max 1hour turnaround?
Time to contact radiology/ED for imaging queries by query type	Local audit	N/A
Consultant input to ED clinical care	% of patients with consultant input in majors/resus	100% in hours ? OOH
Reg input to consultant care	% of patients not having consultant inpit that received registrar level input majors/resus	100%
Mortality/Morbidity	Mortality and morbidity rates by patient group and day of week	improved mortality in Dr Foster HSMR data
Input from Critical Care/ED team to resus	local analysis of input split by patient type in resus	N/A
admissions and utilisation of EDU	Volumes of admissions/transfers and discharges to/from EDU by patient stream and Average and Max LOS	TBC discharge home rate TBC Average LOS TBC max LOS
Admission avoidance	percentage of patients discharged direct from EDU without inpatient admission by pathway	TBC Discharge home rate
Patinets deflected to UCC or other external providers	% of attendances assessed and referred to alternative provider from minors	TBC
Patient experience	% of patients rating their experience as good or better	Positive trend
Case mix/load	% of minors staff rating their caseload as manageable and appropriate	positive trend
Capacity of staff matched to demand	time to treatment and time in department variation across the day/charted against demand	no/minimal variance across the day
Use of initial escalation steps	% of days when the highest level of escalation are triggered	a reduction in the % of days when the director on call is required to input to flow
Clarity of roles and responsibilities		a positive trend post implementation

o understand base line and measure	
mprovement against LoS targets for the	
WORKSTREAM 2	
The number (and percentage) of patients who are streamed from ED to Bed beurea	Positive trend expected
he number (and percentage) of GP eferrals via the bed bureau per hour and lay	Positive trend expected
admitted to hospital with a length of stay of ero	Positive trend expected
he number of slots booked	Positive trend expected
	Average length of stay of 6 hours, maximum length of stay of 14 hours.
	>60% discharge home rate from rapid assessment area
	Positive trend expected
, ,	Positive trend expected
he time from patient arrival to consultant	A reduction in time expected
The number and percentage of patients with a length of stay on the unit of <48 hours	Maximum length of stay of 48 hours.
	Positive trend expected
	NA
he time from patient arrival to consultant	Average length of time from patient arrival on the unit to consultant assessment
he number of empty beds throughout the	Proportion of empty beds to accept daily demand.
AMU length of time between request made o report verified	Less than 1 hour turn around
The state of the s	The number (and percentage) of patients who are streamed from ED to Bed beurea the number (and percentage) of GP eferrals via the bed bureau per hour and ay the number (and percentage) of patients dmitted to hospital with a length of stay of ero the number of slots booked The percentage (total volume) of patients who have a length of stay of <6 and 14 ours the number and percentage of patients ischarged home as opposed to transfer the number of sleep overs in the area the number of empty beds throughout the ay the time from patient arrival to consultant sessment the number and percentage of patients with length of stay on the unit of <48 hours the number and percentage of patients ischarged home from the unit the number and percentage of patients ischarged home from the unit the number and percentage of patients ischarged home from the unit the number and percentage of patients ischarged home from the unit to a base ward. The time from patient arrival to consultant sessment the number of empty beds throughout the ay. MU length of time between request made
